Mark scheme for Paper 1 Tiers 3–5, 4–6, 5–7 and 6–8

OCA

Ma

KEY STAGE

ALL TIERS

2005

500

3

department for education and skills creating opportunity, releasing potential, achieving excellence

Introduction

The test papers will be marked by external markers. The markers will follow the mark scheme in this booklet, which is provided here to inform teachers.

This booklet contains the mark scheme for paper 1 at all tiers. The paper 2 mark scheme is printed in a separate booklet. Questions have been given names so that each one has a unique identifier irrespective of tier.

The structure of the mark schemes

The marking information for questions is set out in the form of tables, which start on page 12 of this booklet. The columns on the left-hand side of each table provide a quick reference to the tier, question number, question part, and the total number of marks available for that question part.

The Correct response column usually includes two types of information:

- a statement of the requirements for the award of each mark, with an indication of whether credit can be given for correct working, and whether the marks are independent or cumulative;
- examples of some different types of correct response, including the most common.

The Additional guidance column indicates alternative acceptable responses, and provides details of specific types of response that are unacceptable. Other guidance, such as when 'follow through' is allowed, is provided as necessary.

Questions with a UAM element are identified in the mark scheme by an encircled U with a number that indicates the significance of using and applying mathematics in answering the question. The U number can be any whole number from 1 to the number of marks in the question.

For graphical and diagrammatic responses, including those in which judgements on accuracy are required, marking overlays have been provided as the centre pages of this booklet.

The 2005 key stage 3 mathematics tests and mark schemes were developed by the Mathematics Test Development Team at QCA.

General guidance

Using the mark schemes

Answers that are numerically equivalent or algebraically equivalent are acceptable unless the mark scheme states otherwise.

In order to ensure consistency of marking, the most frequent procedural queries are listed on the following two pages with the prescribed correct action. This is followed by further guidance relating to marking of questions that involve money, time, algebra, coordinates, negative numbers or probability. Unless otherwise specified in the mark scheme, markers should apply the following guidelines in all cases.

The pupil's response does not match closely any of the examples given.	Markers should use their judgement in deciding whether the response corresponds with the statement of requirements given in the Correct response column. Refer also to the Additional guidance .
The pupil has responded in a non-standard way.	Calculations, formulae and written responses do not have to be set out in any particular format. Pupils may provide evidence in any form as long as its meaning can be understood. Diagrams, symbols or words are acceptable for explanations or for indicating a response. Any correct method of setting out working, however idiosyncratic, is acceptable. Provided there is no ambiguity, condone the continental practice of using a comma for a decimal point.
The pupil has made a conceptual error.	In some questions, a method mark is available provided the pupil has made a computational, rather than conceptual, error. A computational error is a slip such as writing $4 \times 6 = 18$ in an otherwise correct long multiplication. A conceptual error is a more serious misunderstanding of the relevant mathematics; when such an error is seen no method marks may be awarded. Examples of conceptual errors are: misunderstanding of place value, such as multiplying by 2 rather than 20 when calculating 35×27 ; subtracting the smaller value from the larger in calculations such as $45 - 26$ to give the answer 21; incorrect signs when working with negative numbers.
The pupil's accuracy is marginal according to the overlay provided.	Overlays can never be 100% accurate. However, provided the answer is within, or touches, the boundaries given, the mark(s) should be awarded.
The pupil's answer correctly follows through from earlier incorrect work.	Follow through marks may be awarded only when specifically stated in the mark scheme, but should not be allowed if the difficulty level of the question has been lowered. Either the correct response or an acceptable follow through response should be marked as correct.
There appears to be a misreading affecting the working.	This is when the pupil misreads the information given in the question and uses different information. If the original intention or difficulty level of the question is not reduced, deduct one mark only. If the original intention or difficulty level is reduced, do not award any marks for the question part.
The correct answer is in the wrong place.	Where a pupil has shown understanding of the question, the mark(s) should be given. In particular, where a word or number response is expected, a pupil may meet the requirement by annotating a graph or labelling a diagram elsewhere in the question.

What if ...

[r	1	
The final answer is wrong but the correct answer is shown in the working.	Where appropriate, detailed guidance will be given in the mark scheme and must be adhered to. If no guidance is given, markers will need to examine each case to decide whether:		
working.	the incorrect answer is due to a transcription error;	If so, award the mark.	
	in questions not testing accuracy, the correct answer has been given but then rounded or truncated;	If so, award the mark.	
	the pupil has continued to give redundant extra working which does not contradict work already done;	If so, award the mark.	
	the pupil has continued, in the same part of the question, to give redundant extra working which does contradict work already done.	If so, do not award the mark. Where a question part carries more than one mark, only the final mark should be withheld.	
The pupil's answer is correct but the wrong working is seen.	A correct response should always be marked as correc scheme states otherwise.	t unless the mark	
The correct response has been crossed or rubbed out and not replaced.	Mark, according to the mark scheme, any legible cross that has not been replaced.	sed or rubbed out work	
More than one answer is given.	If all answers given are correct or a range of answers is given, all of which are correct, the mark should be awarded unless prohibited by the mark scheme. If both correct and incorrect responses are given, no mark should be awarded.		
The answer is correct but, in a later part of the question, the pupil has contradicted this response.	A mark given for one part should not be disallowed for given in a different part, unless the mark scheme speci	-	

What if ...

Marking specific types of question

Responses involving money For example: £3.20 £7	
Accept 🗸	Do not accept ×
 Any unambiguous indication of the correct amount eg £3.20(p), £3 20, £3,20, 3 pounds 20, £3-20, £3 20 pence, £3:20, £7.00 The f sign is usually already printed in the answer space. Where the pupil writes an answer other than in the answer space, or crosses out the f sign, accept an answer with correct units in pounds and/or pence eg 320p, 700p 	 Incorrect or ambiguous use of pounds or pence g £320, £320p or £700p, or 3.20 or 3.20p not in the answer space. Incorrect placement of decimal points, spaces, etc or incorrect use or omission of 0 eg £3.2, £3 200, £32 0, £3-2-0, £7.0

Responses involving time A time interval For example: 2 hours 30 mins						
Accept 🗸	Take care ! Do not accept ×					
 ✓ Any unambiguous indication eg 2.5 (hours), 2h 30 ✓ Digital electronic time ie 2:30 	 Incorrect or ambiguous time interval eg 2.3(h), 2.30, 2-30, 2h 3, 2.30min The time unit, hours or minutes, is usually printed in the answer space. Where the pupil writes an answer other than in the answer space, or crosses out the given unit, accept an answer with correct units in hours or minutes, unless the question has asked for a specific unit to be used. 					
A specific time For example: 8.40am, 17:20						
Accept 🗸	Do not accept ×					

 ✓ Any unambiguous, correct indication eg 08.40, 8.40, 8:40, 0840, 8 40, 8-40, twenty to nine, 	× Incorrect time eg 8.4am, 8.40pm
8,40	 Incorrect placement of separators, spaces, etc or incorrect use or
✓ Unambiguous change to 12 or 24 hour clock	
eg 17:20 as 5:20pm, 17:20pm	

Г

Accept 🗸	Take care ! Do not accept
✓ Unambiguous use of a different case or variable eg N used for n x used for n	! Unconventional notation eg $n \times 2$ or $2 \times n$ or $n2$ or $n + n$ for $2n$ $n \times n$ for n^2 $n \div 2$ for $\frac{n}{2}$ or $\frac{1}{2}$ n 2 + 1n for $2 + n2 + 0n$ for $2Within a question that demandssimplification, do not accept as partof a final answer involving algebra.Accept within a method whenawarding partial credit, or within aexplanation or general working.$
	 Embedded values given when solvin equations eg in solving 3x + 2 = 32, 3 × 10 + 2 = 32 for x = 10
	To avoid penalising the two types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of eac type within each question. Where question part carries more than one mark, only the final mark should be withheld.
✓ Words used to precede or follow equations or expressions eg $t = n + 2$ tiles or tiles = $t = n + 2$ for $t = n + 2$	Words or units used within equation or expressions eg n tiles + 2 n cm + 2 Do not accept on their own. Ignore if accompanying an acceptation response.
 ✓ Unambiguous letters used to indicate expressions eg t = n + 2 for n + 2 	 Ambiguous letters used to indicate expressions eg n = n + 2 for n + 2

Responses involving coordinates For example: (5, 7)		
Accept 🗸	Do not accept ×	
✓ Unconventional notation eg (05, 07) (five, seven) (5, 7) (x=5, y=7)	* Incorrect or ambiguous notation eg (7, 5) (7, 5) (5x, 7y) (5 ^x , 7 ^y) (x - 5, y - 7)	

For example: -2		
Accept 🗸	Do not accept ×	
	To avoid penalising the error below more than once within each question do not award the mark for the first occurrence of the error within each question. Where a question part carries more than one mark, only the final mark should be withheld. * Incorrect notation eg 2-	

П

For example: 0.7 or $\frac{7}{10}$ or 70%	-
Accept 🗸	Take care ! Do not accept
 ✓ Equivalent decimals, fractions and percentages eg 0.700, ⁷⁰/₁₀₀, ³⁵/₅₀, 70.0% 	The first four categories of error be should be ignored if accompanied an acceptable response, but should not be accepted on their own. However, to avoid penalising the f three types of error below more th once within each question, do not award the mark for the <i>first</i> occurrence of each type of error unaccompanied by an acceptable response. Where a question part carries more than one mark, only t final mark should be withheld.
✓ A probability correctly expressed in one acceptable form which is then incorrectly converted, but is still less than 1 and greater than 0 eg $\frac{70}{100} = \frac{18}{25}$! A probability that is incorrectly expressed eg 7 in 10 7 over 10 7 out of 10 7 from 10
	! A probability expressed as a percentage without a percentage sign.
	! A fraction with other than integer the numerator and/or denominato
	! A probability expressed as a ratio eg 7 : 10, 7 : 3, 7 to 10
	 A probability greater than 1 or less than 0

9

0

Recording marks awarded on the test paper

All questions, even those not attempted by the pupil, will be marked, with a 1 or a 0 entered in each marking space. Where 2m can be split into 1m gained and 1m lost, with no explicit order, then this will be recorded by the marker as 1

The total marks awarded for a double page will be written in the box at the bottom of the right-hand page, and the total number of marks obtained on the paper will be recorded on the front of the test paper.

A total of 120 marks is available in each of tiers 3–5 and 4–6. A total of 121 marks is available in each of tiers 5–7 and 6–8.

Awarding levels

The sum of the marks gained on paper 1, paper 2 and the mental mathematics paper determines the level awarded. Level threshold tables, which show the mark ranges for the award of different levels, will be available on the QCA website *www.qca.org.uk/* from Monday 20 June 2005. QCA will also send a copy to each school in July.

Schools will be notified of pupils' results by means of a marksheet, which will be returned to schools by the external marking agency with the pupils' marked scripts. The marksheet will include pupils' scores on the test papers and the levels awarded. **BLANK PAGE**

	 Quest			Average heights
1			Correct response	Additional guidance
a		1m	133	
b		1m	7	

Tie	Tier & Question		& Question			Making 24
3-5	4-6	5-7	6-8			-
2					Correct response	Additional guidance
				2m	Gives three different correct pairs of numbers eg 2 × 12 3 × 8 4 × 6 24 × 1 12 × 2 6 × 4	 Fractions, decimals or negative numbers For 2m or 1m, correct pair of numbers repeated, but in reverse order Do not accept as a different correct pair
				<i>or</i> 1m	Gives two different correct pairs of numbers	

Tier & Question			tion	M/rito		Write a number
3-5	4-6	5-7	6-8			
3					Correct response	Additional guidance
a				1m	Gives a value that is greater than 1000, but less than 1100 eg 1001 1099	 ✓ Fractions or decimals ★ For part (a), number given in words
b				1m	Gives a decimal that is greater than 0, but less than 1 eg 0.5 0.12 Point two	× For part (b), number given as a fraction

	Tier & Question 3-5 4-6 5-7 6-8		3-D shape				
4					Correct response	Additional guidance	
a				1m	Indicates C	 Unambiguous indication Accept eg, for part (b) accept Cube and cuboid 	
b				1m	Indicates A and E in either order	eg, for part (b) do not accept • Square and rectangle	
с				1m	7		

Tier 3–5 only

Tier	· & C	ues	tion							D:	
3-5	4-6	5-7	6-8			Digits					
5					Correct response		A	dditiona	l guidar	ice	
a				1m	Gives all four correct numbers, ie 537 573 735 753 in any order						
b	b			1m 1m	1m Cor	Identifies the smallest and the biggest numbers from their list (including the two given numbers), provided their list has at least four numbers	 ✓ For both marks, follow through Markers may find the following sums using the values from a correct list useful: + 357 357 - 375 375 732 - 537 				
					 if they are not from their list, provided their numbers each have at least three digits and the addition requires at least one 'carry' eg 357 + 753 = 1110 537 + 753 = 1290 333 + 777 = 1110 357 + 375 + 537 + 573 + 735 + 753 = 3330 or Gives the value 1110, without identifying their smallest and biggest numbers 	+ 357	357			useful: 573 - 1308 1326	735 - 1488

Tier	& Questic	on		Different shapes
3-5 4 6	4-6 5-7 6	-8	Correct response	Additional guidance
		3m	Gives all four different correct shapes in any orientations with none incorrect or duplicated eg	! Lines not ruled or accurate, shapes not shaded or internal lines omitted Accept provided the pupil's intention is clear
				 For 3m, correct shapes duplicated even if orientation is different Condone duplication of the given shape, ie a 1 by 4 rectangle For 3m, do not accept other duplicates Squares not joined correctly side-to-side Do not accept as a correct shape eg •
		or 2m	Gives at least three different correct shapes, even if there are other incorrect or duplicated shapes	•
		or 1m U1	Gives two different correct shapes, even if there are other incorrect or duplicated shapes	

Tie	Tier & Question				Food and drink	
3-5	4-6	5-7	6-8			
7					Correct response	Additional guidance
a				1m	£ 1.55	
b				2m	Indicates the correct item of food and the correct drink, ie Pizza and juice, in either order	✓ Unambiguous indication eg • P, J
				or 1m U1	Shows the digits 24(0)	

Tie	r & C)ues	tion			Nieuro Iana a
3-5	4-6	5-7	6-8			Number lines
8	1				Correct response	Additional guidance
				1m	53	
				1m	17	
				1m	-5	
				2m	Gives both the values –9 and (+)3 in the correct positions	
				or 1m	Gives one correct value in the correct position or Gives both the values (+)3 and –9 but with the	
					positions reversed	

Tie	er & Question				Chanas	
3-!	5 4-	5 5-7	6-8			Shapes
9	2				Correct response	Additional guidance
				2m or 1m	Gives all three correct areas, ie 16 4 8 Gives any two correct areas	 ! For 1m, follow through Provided their 2nd < their 3rd < their 1st, accept the following: For their 2nd, accept follow through as their 1st ÷ 4 For their 3rd, accept follow through as their 1st ÷ 2 or their 2nd × 2 eg, for 1m accept • 20 (error), 5, 10 • 1 (error), ¹/₄, ¹/₂ • 16, 2 (error), 4 eg, for 1m do not accept • 16, 8 (error), 16

Tie	Fier & Question		& Question		& Question		Question		Question			Commentation
3-5	4-6	5-7	6-8			Computation						
10	3				Correct response	Additional guidance						
a	a			1m	10.2 or equivalent							
b	b			1m	9.5 or equivalent							
с	с			1m	1270							
d	d			1m	57							

Tieı	r & C)ues	tion		Scales					
3-5	4-6	5-7	6-8			Scales				
11	4				Correct response	Additional guidance				
a	a			1m	900					
				1m	200	! Follow through Accept follow through as 1100 – their value for the first mark,				
				(U1)		provided this gives a positive value				
b	b			1m	Indicates 1000, ie					
					1 10 100 1000 10 000					

Tie	er & Question				Danga of agos	
3-5	4-6	5-7	6-8			Range of ages
12	5				Correct response	Additional guidance
а	a			1m	 Gives two ages with a difference of 7 years eg 1 and 8 7 and 14 7 and 0 20 and 13 	 <i>Ages given using part-years</i> Accept provided the difference is 7 years eg, accept 6 months and 7¹/₂
b	b			1m	0	 ! Response given in words Accept provided there is no ambiguity eg, accept Zero Nothing eg, do not accept No range ! Units amended Accept responses giving a short time interval eg, accept A few minutes A couple of hours

Tier	Tier & Question					Placing fractions
		5-7	6-8			
13	6				Correct response	Additional guidance
	0			2m or 1m	Gives all four fractions in the correct positions, ie Gives at least two fractions in the correct positions or Converts at least three of the four correct values into a form enabling comparison, even if the positions are incorrect and there are other errors eg At least three of: $\frac{90}{120}$, $\frac{15}{120}$, $\frac{40}{120}$, $\frac{72}{120}$ At least three of: 0.75 , 0.125 , 0.33 , 0.6 $\frac{30}{40}$, $\frac{5}{40}$, $\frac{24}{40}$ $\frac{18}{24}$, $\frac{3}{24}$, $\frac{8}{24}$ $\frac{45}{60}$, $\frac{20}{60}$, $\frac{36}{60}$	Additional guidance V Unambiguous indication of fractions For $\frac{1}{3}$ as a decimal, accept 0.33 or better For $\frac{1}{8}$ as a decimal, accept 0.13 or better eg, for 2m accept 0 0.5 1 1 $\frac{1}{20}$ $\frac{12}{20}$ $\frac{15}{20}$ 0 0.5 1 0.125 0.33 0.6 0.75

Tie	er & Question					
3-5	4-6	5-7	6-8			Survey results
14	7				Correct response	Additional guidance
a	а			1m	Draws a correct bar for Don't know that indicates 9 people	 <i>Bar not ruled, accurate or shaded</i> Accept provided the pupil's intention is clear, and the height of the bar is closer to 9 than to either 8 or 10 <i>Bar incorrectly positioned or of an</i> <i>incorrect width</i> Condone
b	b			1m (U1)	Indicates 3 circles for Don't know	 <i>Circles not shaded or inaccurate in size</i> Accept provided the pupil's intention is clear <i>Follow through from part (a)</i> Accept the number of circles drawn as the height of their bar for Don't know ÷ 3 If this results in a part circle, condone any inaccuracy in their part circle

Tie	r & Q)ues	tion			Descentarios
3-5	4-6	5-7	6-8			Percentages
15	8	1			Correct response	Additional guidance
а	a	a		1m	7	! For the first mark, 'out of 10' repeated eg • $\frac{7}{10}$ Condone
				1m	50	
b	b	b		1m	Completes the sentence correctly with two values that are in the ratio 1 : 20 eg 1 out of 20 5 out of 100 0.5 out of 10 10 out of 200 2.5 out of 50	
				1m (U1)	Completes the sentence correctly, in a different way from one previously credited	 <i>Follow through</i> Accept as two values in the same ratio as their two values for the first mark, provided their first value < their second value eg, from their first mark as 1 out of 5 accept 2 out of 10

Tie	Tier & Question					What is my number?
3-5	4-6	5-7	6-8			What is my number?
17	10	3			Correct response	Additional guidance
				2m	21	
				or 1m	Shows or implies that $2 \times my$ number is 42 eg • $2 \times my$ number = $357 - 315$ = 42 • $2x = 42$ • $42 \div 2$ or Shows a complete correct method with not more than one computational error, even if their choice between alternative answers is	
				(U1)	incorrect or omitted eg 15 × 10 = 150, 150 + 150 + 15 = 315, so it's 10 + 10 + 1 357 - 170 - 170 - 17 - 17 (error) = 0, so it's 10 + 10 + 1 + 1 = 22 15 315 21 5 (error) 1 15 315 17 357	

	uest 5-7	_			Completing
11				Correct response	Additional guidance
			1m 1m	32 12	 For the first and second marks, incomplete processing Penalise only the first occurrence eg, for the first and second marks 4 × 8 48 ÷ 4 Mark as 0, 1
			1m	Gives a correct expression in x with a value of 48 when x is 8 eg • $6x$ • $x + 40$ • $3x + 24$	 For the third mark, unconventional notation Condone eg, for the third mark accept 6 × x x6

Tier	Tier & Question					
3-5	4-6	5-7	6-8			Mean and median
19	12	5			Correct response	Additional guidance
а	a a a	a		1m	 Shows that the mean is 10 eg 9 + 11 + 10 = 30, 30 ÷ 3 (9 + 11 + 10) ÷ 3 10 is already 10, then 9 is 1 below and 11 is 1 above 	 ✓ Minimally acceptable explanation eg 30 ÷ 3 30 ÷ 10 = 3 9 + 11 = 20, 20 ÷ 2 Add one to 9 and take one off 11 10 is halfway between 9 and 11 ✓ Method described
						eg • You add them up then divide by how many there are
						Incorrect statement eg • 9 + 10 + 11 ÷ 3 = 10 • 3 ÷ 30 = 10
				1m	 Gives a correct explanation of why the median is 10 eg 10 is the middle number when the numbers are in order The median is the middle number when the numbers go from smallest to largest 	 ✓ Minimally acceptable explanation eg It is the middle number It's the middle largest It's the second smallest 9 (10) 11 It is in between
						 <i>Incomplete or incorrect explanation</i> eg 9 10 11 10 is halfway between 9 and 11
b	b	b		1m (U1)	Gives four values that total 40 and whose middle two numbers, when ordered, add to 20, with none of the values being 10 eg 8 9 11 12 0 0 20 20 9 11 9 11 7 13 9 11	✓ Fractions, decimals and negatives

	Ques	-			Angles
<u> </u>	8 6			Correct response	Additional guidance
			1m	Shows angle <i>a</i> as 50	
			1m	Shows angle <i>b</i> as 130	! For the second mark, follow through Accept follow through as 180 – their a, provided their a < 90 and is not 54 to 56 inclusive
			1m	Shows angle <i>c</i> as 20	! For the third mark, follow through Accept follow through as $150 -$ their <i>b</i> or their <i>a</i> - 30, provided this gives a positive value

	Tier & Question 3-5 4-6 5-7 6-8				Equations	
21	14	7			Correct response	Additional guidance
				1m 1m	5 3	 ! Incorrect notation eg, for the first mark • ×5 Penalise only the first occurrence ! Incomplete processing eg, for the first mark • 15/3 Penalise only the first occurrence

Tier & Question 3-5 4-6 5-7 6-8			Long multiplication
22 15 8		Correct response	Additional guidance
22 15 8	2m or 1m	Shows a complete correct method with not more than one computational error eg $3740 + 3740 + 374 \times 3 = 7480 + 1122$ $\frac{300 70 4}{20 6000 1400 80}$ 3 900 210 12 so $6000 + 1400 + 80 + 900 + 210 + 12$ 374 $\frac{23}{1126}$ (error) $\frac{7480}{8606}$	Additional guidance * Conceptual error eg • 374 23 1122 748 1870

Tie	r & Q)uest	ion			Midpoint
3-5	4-6	5-7	6-8			Μαροπτ
23	16	9	1		Correct response	Additional guidance
	a	a	a	1m	(60, 60)	
	b	b	b	1m	Gives M as (0, 100)	
				1m	Gives N as (60, 0)	 <i>Answers for M and N transposed but</i> <i>otherwise completely correct</i> If this is the only error, ie gives M as (60, 0) and gives N as (0, 100), mark as 0, 1 <i>x- and y-coordinates transposed but</i> <i>otherwise correct for both M and N</i> If this is the only error, ie gives M as (100, 0) and gives N as (0, 60), mark as 0, 1

Tier &	Quest	tion			Square cut
3-5 4-6	+				-
17	10	2		Correct response	Additional guidance
			2m	42, with no evidence of an incorrect method	 ★ Incorrect method eg • 12 + 2 = 14, 14 × 3 = 42
			or 1m	Shows or implies that the square is a 9(cm) by 9(cm) square eg • 7 × 6 seen • 6 7 • 7 • 6 7 • 7 • 6 • 7 • 6 • 7 • 7 • 7 • 7 • 7 • 7 • 7 • 7	

Tiers 4–6, 5–7, 6–8

Tier	& Q	uest	tion			Making zoro
	-5 4-6 5-7 6-8			1	Making zero	
	18	11	3		Correct response	Additional guidance
	a	a	a	1m	Indicates only the second statement, ie	
	b	b	b	1m	Indicates that the other number is zero eg 0 Zero	 ✓ Minimally acceptable indication eg • 0 + 0 • Same Use of negative sign eg • -0 Condone
				1m	Gives a correct pair of non-zero values that add to make zero eg 1 and -1 -45 and +45 x and -x	 ★ Operation changed eg eg • 1 – 1 ['and' crossed out]

Tier &	Ques	tion			
3-5 4-	6 5-7	6-8			Dividing fractions
20) 13	5		Correct response	Additional guidance
			3m or 2m	Gives the first value as 2 and the second value as 6 Gives an incorrect or omitted first value but correctly gives the second value as 6 or Gives an incorrect first value but follows through correctly for the second value as their first value × 3, provided their first value is a positive integer eg • first value: 4 second value: 12 or Gives the correct first value and shows or implies a correct method for the second value with not more than one computational error eg • 2×3 • $3 \div 0.5$ • $\frac{3}{4} \times \frac{8}{1}$ • $\frac{24}{4}$ • $\frac{6}{8} \div \frac{1}{8}$ • Answer of $\frac{6}{8}$ or equivalent, with no evidence of an incorrect method	For the second value $\frac{6}{1}$ I Eighths repeated Accept as the final answer for the first value eg, for the value 2 accept $\cdot \frac{2}{8}$ Do not accept as the final answer for the second value eg, for the value 6 do not accept $\cdot \frac{6}{8}$ × For 2m or 1m, conceptual error eg $\frac{6}{8} \div \frac{1}{8} = \frac{5}{8}$
			or 1m	Gives an incorrect or omitted first value but shows or implies a correct method for the second value with not more than one computational error	 For 1m, follow through For 1m, accept follow through as the intention to multiply their first value by 3 shown or implied eg, accept first value: 4/8 second value: 11/2 or equivalent first value: 4/8 then 4/8 × 3 seen

3-5	4-6	5-7	6-8		Refer to the new algebra general guidance	Solving an equation
	21	14	6		Correct response	Additional guidance
				2m	$\frac{25}{4}$ or equivalent	* For 2m, $\frac{25}{4}$ seen but with incorrect further working
				or 1m	Shows or implies a correct first step of algebraic manipulation that either reduces the number of terms or collects variables on one side of the equation and numbers on the other eg 2t = 25 - 2t -25 + 2t = -2t 2t + 2t = 100 - 75 75 + 4t = 100 4t = 25 $25 \div 4$ seen	 ^{eg} ★ 25/4 = 6.1 ! <i>Method used is trial and improvement</i> Note that no partial credit can be given

Tier & (_			Angle <i>p</i>
3-5 4-6 22	15		Correct response	Additional guidance
		2m	140	
		or 1m	Shows the value 110 or 220 or Shows or implies a complete correct method with not more than one computational error eg • $360 - 2 \times (180 - 35 \times 2)$ • $360 - (360 - 4 \times 35)$ • 70×2 • $35 + 35 = 80 \ (error), \ 180 - 80 = 100$ $360 - 100 \times 2 = 160$	

Tier & Question			ion	Spood humps		
3-5			_		1	Speed bumps
Ц	23	16	8		Correct response	Additional guidance
		а	a	2m	Completes both sentences correctly, with all four values in the correct positions, ie 46 12 35 3	 <i>Throughout the question, key not interpreted</i> eg, for the value 46 4 6 Penalise only the first occurrence
				or 1m	Gives at least two values in the correct positions or Shows the values 46, 12, 35 and 3, even if their positions are incorrect	
		b	b	1m	Gives a correct justification eg • 38 – 28 = 10 • It falls from 38 to 28	 ✓ Minimally acceptable justification eg 38 and 28 identified, with no evidence of an incorrect method 4 Ambiguous notation eg 28 – 38 Condone ★ Incomplete or incorrect justification eg The difference between the middle numbers before and after is 10 Indicates both values of 8 corresponding to the units of 38 and 28 on the diagram, but with no interpretation of the key Before the median was 39, after the median was 29, so it fell by 10

Tie	er & Question				Ctusis bt line susab	
3-5	4-6	5-7	6-8		Refer to the new algebra general guidance	Straight line graph
	24	17	9		Correct response	Additional guidance
	a	a	a	1m	Indicates that the <i>y</i> -coordinate is 146	 ✓ Indication is within a pair of correct coordinates eg, for part (a) • (50, 146) eg, for part (b)
	b	b	b	1m	Indicates that the <i>x</i> -coordinate is 18	 (18, 50) Answers to parts (a) and (b) transposed but otherwise correct Mark as 0, 1
		С	c	1m	Indicates Yes and gives a correct explanation with no evidence of incorrect working eg • When $x = -10$, $y = 3 \times -10 - 4$ = -30 - 4 = -34 • $3x - 4 = -34$ 3x = -30 x = -10	 ✓ Minimally acceptable explanation eg -30 ÷ 3 = -10 When x = -10, 3x - 4 = -34 The second number is equal to the first number multiplied by 3, minus 4 × Incomplete or incorrect explanation eg When x = -10, y = -34 3x - 4 = -34

Tier & Question			tion				
3-5	4-6		6-8 10		Correct response	Additional guidance	
				3m	Gives four different correct pairs of values for x and y eg • $x = 64$ $y = 1$ x = 8 $y = 2x = 4$ $y = 3x = 2$ $y = 6• x = \frac{1}{64} y = -1x = 4096 y = \frac{1}{2}x = \sqrt{8} y = 4x = -8$ $y = 2$		
				or 2m	Gives three different correct pairs of values for x and y , even if there are errors, omissions or repeats		
				or 1m	Gives two different correct pairs of values for <i>x</i> and <i>y</i> , even if there are errors, omissions or repeats		
er & Question		Sixth					
-------------------------------	---	--					
5 4-6 5-7 6-8 19 11	Correct response	Additional guidance					
1	m Gives a correct justificationThe most common correct justifications:	! Response contains an incorrect statement Ignore alongside a correct response eg, accept • $\frac{1}{3}$ is 33 and 100 ÷ 6 = 16					
	State or imply that $\frac{2}{6} = \frac{1}{3}$ and use the known fact that $\frac{1}{3}$ rounds to 33% eg • $\frac{2}{6} = \frac{1}{3}$ which is 33 to the nearest per cent Show or imply that the percentage should be 33 by showing a more accurate percentage, or a correct method eg • It's $33\frac{1}{3}$ % so it rounds to 33 not 34 • $100 \div 6 \times 2 = 33.33$, so 33 • Double 16.7 is 33.4 • $34 \times 3 = 102$, but $33 \times 3 = 99$ which is closer to 100	 ✓ Minimally acceptable justification eg • 1/3 is 33 ※ Incomplete justification eg • It's 33% not 34% ✓ Minimally acceptable justification eg • 33.3 • 100 ÷ 6 × 2 gives 33 • 34 × 3 = 102 but 33 × 3 = 99 ! More accurate percentage rounded or truncated For 1/3, accept 33.3% or better For 1/6, accept 16.7% or 16.66% or better 					
	 Refer to the effect of the premature rounding, for example by giving a possible value for ¹/₆ in the range 16.5 to 16.75 inclusive, or 17.25 to 17.5 inclusive, and shows or implies the percentage for ²/₆ could be 33 or 35 ^{eg} If ¹/₆ were 16.6%, it would be 17% to the nearest per cent, but double 16.6 is 33.2 ¹/₆ could be 17.4, but 17.4 × 2 = 34.8 	 <i>× Incomplete justification</i> eg 100 ÷ 6 × 2 34 × 3 = 102 (or 33 × 3 = 99) <i>✓ Minimally acceptable justification</i> eg 17% is rounded not exact, so when ye double it, you double the error 17 is not exact, so it could be 33 or 3 <i>× Incomplete justification</i> eg ¹/₆ rounds to 17, so ²/₆ could round to Keep adding 17 and you don't get to 1 17 × 6 = 102 <i>× Incorrect justification that implies hypothetical values are the correct values</i> eg ¹/₆ = 16.5% so ²/₆ = 33% 					

-	Fier & Question 3-5 4-6 5-7 6-8					
		20	12		Correct response	Additional guidance
		a	a	1m	5	
		b	b	1m	Gives a value between 3500 and 5500 inclusive	 Incorrect units inserted eg 5000 miles Ignore

2005 KS3 Mathematics test mark schatspapers.org

Tier & C				Refer to the new algebra general guidance	Which triangles?
3-5 4-6		⁶⁻⁸		Correct response	Additional guidance
	a	a	1m	Indicates the correct triangle, ie and gives a correct equation linking <i>a</i> , <i>b</i> and <i>c</i> for the other triangle eg • $a^2 + c^2 = b^2$ • $b^2 - a^2 = c^2$ • $b^2 - c^2 = a^2$ • $b = \sqrt{a^2 + c^2}$	
	Ь	b	1m	 Indicates the correct triangle, ie and gives a correct explanation for the other triangle The most common correct explanations: State or imply that the third angle in the triangle on the right is not 90° eg 180 - 75 - 25 = 80 not 90, so you can't use Pythagoras' Theorem Angle C is not 90, so it's not a right-angled triangle 	 ✓ Minimally acceptable explanation eg Not 90 Not a right angle It only works when it's right-angled × Incomplete explanation that does not refer explicitly to 90° eg 180 - 75 - 25 = 80 You can't use Pythagoras' Theorem The angles are wrong
				 Show that if the third angle in the triangle on the right were 90°, the triangle would not be possible If the missing angle is 90, the angles add up to 190 not 180 	 ✓ Minimally acceptable explanation eg If you put 90 in you don't get 180 A right-angled triangle is impossible with those angles, they should make 180 The angles add up to 190 [right angle marked on right hand triangle] They add up to 100 not 90 × Incomplete explanation that does not refer explicitly to 90° eg The angles would add up to 190, not 180

Tiers 5–7, 6–8

					Swoot poor
2	-5 4-6 5-7 6-8				Sweet peas
24	2 1	4		Correct response	Additional guidance
а	a		1m 1m	$\frac{89}{100}$ or equivalent probability $\frac{17}{20}$ or equivalent probability	 Unconventional notation, but equivalent value eg, for the first mark ^{17.8}/₂₀ Condone
					! Estimates transposed but otherwise correct Mark as 0, 1
b	ь 1	Ь	1m	 Indicates Ravi and gives a correct explanation that states or implies that he used more seeds eg The more trials you have the more accurate your estimate of probability is likely to be The number of seeds in each packet was the same but Ravi had more packets than Meg so he had a greater number of trials There were more seeds to consider 200 seeds is more than 100 seeds 	 ✓ Minimally acceptable explanation eg • More seeds • More packets • He tested more • He tested more • He tested more • He had 200, not 100 • Ravi had 10, Meg had 5 ! Irrelevant statement eg • Ravi's results were more accurate • He had more chance of a bigger number germinating Ignore alongside a correct response, otherwise do not accept × Incomplete, ambiguous or incorrect explanation eg • More • A bigger number • Ravi's = ¹⁷⁰/₂₀₀ which is more than ⁸⁹/₁₀₀ • More of his seeds germinated • He had 5 more seeds • Meg's numbers were more complicated and harder to work out

Tier &	Ques	tion			How mony digita?
3-5 4-0		6-8 15		Correct response	How many digits?
			2m	 Correct response Gives a correct response that satisfies the following four conditions: 1. Indicates the minimum is 4 2. Shows a correct justification for the minimum eg, for condition 2 100 × 10 = 1000 	 ✓ Minimally acceptable justification for the minimum [condition 2] eg • 1000 • 100 × 10 (or 10 × 100)
				 3. Indicates the maximum is 5 4. Shows a correct justification for the maximum eg, for condition 4 999 × 99 = 98 901 999 × 100 = 99 900, a 5-digit number and subtracting 999 does not change it from being a 5-digit number 99 000 is just over the biggest possible so this must have the same number of digits 100 × 1000 = 100 000, but this is the smallest possible 6-digit number, so 99 × 999 must have 5 digits 	 ✓ Minimally acceptable justification for the maximum [condition 4] eg 98 901 999 <u>999</u> <u>999</u> <u>99910</u> 99 900 – 999 99 900 – 999 99 900 (or 99 000) is just over 100 000 1000 × 100 (or 100 × 1000) × Incomplete or incorrect justification for the maximum [condition 4] eg 999 900 – 99 999 000 – 999
			or 1m	Gives a response that satisfies at least condition 4, even if condition 3 is not satisfied or	
			(U2)	Gives a response that satisfies condition 1, satisfies condition 4 with not more than one computational error, then follows through correctly to give their maximum	<pre> ★ Conceptual error eg • 999 <u>× 99 8991 17982 • 99 × 999 = 99 900 - 99 = 99 801 </u></pre>

Tier & 3-5 4-0			Refer to the new algebra general guidance	Simultaneous
	16		Correct response	Additional guidance
		3m	Gives both $x = \frac{3}{2}$ or equivalent and $y = 5$ and shows a complete correct method for solving algebraically eg	× Method used is trial and improvement
			• $4x + 3y = 21$ 4x + 2y = 16 so $y = 5$ $2x + 5 = 8$ so $x = 1\frac{1}{2}$ • $4x + 3y = 21$	
			6x + 3y = 24 so $2x = 3$ therefore $x = 1.5$ and $y = 5$ 2x + y = 8 2x + 2y = 13 so $y = 5$ and $x = \frac{3}{2}$	
			• $4x + 3(8 - 2x) = 21$ 24 - 2x = 21 x = 1.5, so $y = 5$	
		or 2m	Shows a complete correct method for solving algebraically with not more than one error eg • $4x + 3y = 21$ 4x + 2y = 16 so $y = 4$ (error) 2x + 4 = 8 so $x = 2• 4x + 3(8 - 2x) = 214x + 24 - 2x$ (error) = $212x = -3x = -1.5$ and $y = 11$ (or 9)	<pre>! Only error is to use the wrong operation, spuriously eliminating either x or y eg * 4x + 3y = 21 4x + 2y = 16 5y = 37, so y = 7.4 2x + 7.4 = 8 so x = 0.3 Mark as 1, 1, 0</pre>
		or 1m	Forms two correct equations that would allow elimination of either x or y eg • $4x + 3y = 21$ 4x + 2y = 16 • $4x + 3y = 21$ 6x + 3y = 24	 <i>For 1m, equations subtracted without the second equation restated</i> Accept eg, for 1m accept 2x + 2y = 13 seen
			or Attempts to solve by substitution and forms a correct equation in either x or y eg • $4x + 3(8 - 2x) = 21$ • $8 - 2x = \frac{21 - 4x}{3}$ • $8 - y = 10.5 - 1.5y$	

Tier	r & Q	uest	tion		Marking quarkary angilakto	Angle bisector
3-5	4-6				Marking overlay available	-
		25	17		Correct response	Additional guidance
				2m	 Completes a correct angle bisector that fulfils all four of the following conditions: 1. Ruled 2. Within the tolerance as shown on the overlay, even if their line were to be extended 3. At least 3cm in length from A through the acute angle BAC 4. Evidence of correct construction arcs that are centred on two points on lines AB and AC equidistant from A, are of equal radii and have one point of intersection 	 ! Use of construction arcs on the overlay Note that these are to give a visual guide as to whether a correct pair of centres has been used, and do not indicate tolerance ! Section of angle bisector extending from A through reflex angle BAC Accept if needed as part of the 3cm required, provided the section is within the tolerance as shown by the dashed lines on the overlay. Otherwise, ignore ! Extra arcs drawn Ignore * Spurious construction arcs For 2m or 1m, do not accept arcs drawn without compasses, or arcs centred on points on the lines that are not equidistant from A
				or 1m	Gives a response that fulfils condition 4, even if the angle bisector is incomplete, incorrect or omitted

3-5	4-6	5-7	6-8			Star shapes
			18		Correct response	Additional guidance
			a	1m	8	! Units given Condone responses of 8cm only
			b	1m	Gives a different pair of dimensions in the ratio 5 : 2 or 2 : 5 eg 2 and 5 (either order) 10 and 25 (either order) 1 and 2.5 (either order) 12 and 30 (either order)	★ Dimensions of either given diagram Do not accept value 6 and 15 (either order) or 8 and 20 (either order)

	Tier & Question 3-5 4-6 5-7 6-8				Straight lines	
3-5	4-6	_	6-8 19		Correct response	Additional guidance
			a	1m	Gives A as (0, -8)	
				1m	Gives B as (2, 0)	! Answers for A and B transposed but otherwise completely correct If this is the only error, ie gives A as (2, 0) and gives B as (0, -8), mark as 0, 1
			b	1m	Gives a correct equation for the straight line eg y = 2x y - 2x = 0 $x = \frac{y}{2}$! Unconventional notation eg • $y = 2 \times x$ • $y = 2x + 0$ Condone

Tier & Question			Acorps	
3-5 4-6 5-7 6-8		r	Acorns	
20		Correct response	Additional guidance	
a	1m	Gives a correct explanation The most common correct explanations:	 Median line referred to as the 'middle' or 'centre' Condone eg, accept The lines in the middle are at 26 and 29 The centre points of the boxes are 3mm apart 	
		 Show or imply that the median for group A is 26, and for group B is 29 eg Median A – median B = 29 – 26 = 3 26 + 3 = 29 and A is 26, B is 29 	 ✓ Minimally acceptable explanation eg • 26, 29 • A is 29 - 3 • B is 26 + 3 ✓ Incomplete explanation eg • 29 - 3 • 26 + 3 	
		Indicate, in words or on the diagram, the locations of the medians for A and B eg • The vertical lines on the shaded part of the box plots represent the medians and they are 3mm apart on the graph	 ✓ Minimally acceptable explanation eg The lines in the shaded bit are 3 apart The lines in the boxes are the medians Arrows indicating both medians on the diagram × Incomplete explanation eg The vertical lines are 3mm apart on the graph The lines for the medians are 3mm apart on the graph Throughout the question, incorrect units Condone eg, for part (a) accept Throughout the question, ambiguous notation eg, for part (a) 26 - 29 eg, for part (b) 24 - 29 > 27 - 31 	

Tier & Ques				Acorns (cont)
3-5 4-6 5-7	6-8 20	I 1	Correct response	Additional guidance
	b	1m	Indicates A and gives a correct explanation The most common correct explanations:	 ! Inter-quartile range referred to as 'range' Condone eg, accept Range for A = 5, range for B = 4 The boxes show the range and A's is longer
			 Show or imply that the inter-quartile range for A is 5 and for B is 4 eg For A the IQ range is 29 - 24 = 5, for B the IQ range is 31 - 27 = 4 The distance between 24 and 29 is greater than that between 27 and 31 The IQR is 1mm bigger for group A 	 ✓ Minimally acceptable explanation eg 5, 4 29 - 24 > 31 - 27 1 more × Incomplete or incorrect explanation eg 5 is the larger inter-quartile range 31 - 27 is less The inter-quartile range for A is 4cm and for B is 3.2cm [scale ignored]
			 Indicates, in words or on the diagram, the sizes of the inter-quartile ranges for A and B eg The shaded box in A is longer than in B, so A has a bigger inter-quartile range The box for group A covers 6 whole numbers, but for B only 5 	 Minimally acceptable explanation eg The box is bigger Distances between lower and upper quartiles for both A and B indicated It covers 6 numbers, the other covers 5
	с	1m	 Gives a correct reason The most common correct reasons: Refer to possible differences in the conditions of the two samples eg The two groups could have collected the samples at different times of year Group A could have picked from one side of the tree and group B from the other side One group could have picked from the tree, the other from the ground Group B may have collected first and taken most of the larger ones Refer to possible differences in the sizes of the two samples eg One group could have collected a much larger number of acorns than the other One sample may be less representative as they didn't collect enough 	 ✓ Minimally acceptable reason eg Different times Different areas of the tree B's acorns may have had more sunlight ✓ Incomplete or incorrect reason eg Different areas They used different trees ✓ Minimally acceptable reason eg Different numbers of acorns You don't know how many acorns ✓ Some group could have spent longer There could have been more people to collect acorns in one of the groups

Tier & Question		Standard form							
3-5 4-6	5-7								
		21		Correct response	Additional guidance				
		a	1m	Gives a correct justification eg • $(4 \times 10^8) \times (8 \times 10^4) = (4 \times 8) \times (10^8 \times 10^4)$ $= 32 \times 10^{12}$ $= 3.2 \times 10^{13}$ • $4 \times 8 = 32, 8 + 4 = 12,$ so you get $32 \times 10^{12} = 3.2 \times 10^{13}$ • $400\ 000\ 000 \times 80\ 000 = 32\ 000\ 000\ 000\ 000$ $= 3.2 \times 10^{13}$	 ✓ Minimally acceptable justification eg • 32 × 10¹² • 4 × 8 × 10¹² • 400 000 000 × 80 000 = 32 000 000 000 000 [12 zeros shown] × Incomplete justification eg • 32 000 000 000 000 = 3.2 × 10¹³ • 400 000 000 × 80 000 = 3.2 × 10¹³ • (4 × 8) × (10⁸ × 10⁴) = 3.2 × 10¹³ 				
		b	2m	5×10^{3}	 Zero(s) given after the decimal point within standard form notation Condone eg, for 2m accept 5.000 × 10³ 				
			or 1m	Shows a value equivalent to 5×10^3 eg = 5000 = 0.5×10^4 = $\frac{10^4}{2}$ or Shows or implies a correct method that demonstrates understanding of how to process the indices and places the multiplication symbol correctly, with not more than one error eg = $4 \div 8 \times 10^{(8-4)}$ = $4 \times 10^8 \div 8 \times 10^4 = 2 \ (error) \times 10^4$					

	Tier & Question		Data sets						
3-5	4-6		6-8 22		Correct response	Additional guidance			
		22 Correct response 2m Gives both correct values, ie median = 90 mean = 97 or 1m Gives one correct value or U1 Shows the value 9700				<pre>! Incomplete processing Condone eg, for 2m accept * median = 90 mean = 95 + 2</pre>			

Tier & Question 3-5 4-6 5-7 6-8			Marking overlay available	Drawing a rhombus		
	2	.3	Correct response	Additional guidance		
		2m	 Draws a correct rhombus that fulfils all three of the following conditions: 1. Ruled 2. Correct intersecting construction arcs for at least one vertex, using compasses at either 8cm and 10cm or 8cm and 8cm, within the tolerances as shown on the overlay 3. Vertices within the tolerances as shown on the overlay 	 <i>Different orientations</i> Markers should rotate and/or turn over the overlay as appropriate in order to check tolerances for construction arcs and/or vertices <i>Arcs extended or extra arcs</i> Ignore inaccuracies in sections of arcs extending beyond the tolerances as shown on the overlay, or arcs not indicated on the overlay, even if incorrect 		
		or 1m	Gives a response that fulfils either condition 2 or condition 3	! <i>Spurious arcs</i> Do not accept as correct arcs drawn without compasses		

Tier	Tier & Question				a and b			
3-5	4-6	5-7			Refer to the new algebra general guidance	a and b		
			24		Correct response	Additional guidance		
			3m Gives a correct justification eg b + b + 2 = b(b + 2) $2b + 2 = b^2 + 2b$ $2 = b^2$		eg b + b + 2 = b(b + 2) $2b + 2 = b^{2} + 2b$ $2 = b^{2}$	 ✓ Minimally acceptable justification eg • 2b + 2 = b² + 2b 2 = b² 		
					$b = \sqrt{2}$ which is not an integer, so a cannot be an integer either $2a - 2 = a^2 - 2a$ $a^2 - 4a + 2 = 0$ which doesn't factorise, so a is not an integer	! Variables a and b transposed but justification otherwise completely correct eg • $a + a + 2 = a(a + 2)$ $2a + 2 = a^2 + 2a$ $2 = a^2$ $a = \sqrt{2}$		
				or 2m	Shows correct expressions for the sum and product of <i>a</i> and <i>b</i> using only one of the two variables eg	Mark as 1, 1, 0 ! Numerical examples given		
				or 1m	 b + b + 2, b(b + 2) 2a - 2, a² - 2a Shows or implies the use of expressions for a and b involving only one of the two variables eg b, b + 2 a, a - 2 2b + 2 a² - 2a or Shows a different correct equation involving both the variables a and b eg a + b = ab 	Ignore		
				U3)

3-5 4-6				Refer to the new algebra general guidance	•		
		25		Correct response	Additional guidance		
2m		2m	Gives the value 10 and shows or implies a correct method for solving algebraically eg • $\frac{9C}{5} + 32 = 2C + 30$ $\frac{9C}{5} = 2C - 2$ 9C = 10C - 10 10 = C • $2C - \frac{9C}{5} = 32 - 30$ $\frac{10C - 9C}{5} = 2$ $\frac{C}{5} = 2$	× Method used is trial and improvement			
			or 1m	Shows or implies a correct first step of algebraic manipulation using a correct equation in terms of C, that either reduces the number of terms or collects unknowns on one side of the equation and numbers on the other eg • $\frac{9C}{5} + 2 = 2C$ • $0.2C + 30 = 32$ • $2C - \frac{9C}{5} = 32 - 30$ • $\frac{C}{5} = 2$ • 2×5
