Mathematics tests

Mark scheme for Paper 1

Tiers 3–5, 4–6, 5–7 and 6–8

2006

department for

**education and skills**

creating opportunity, releasing potential, achieving excellence

# Introduction

The test papers will be marked by external markers. The markers will follow the mark scheme in this booklet, which is provided here to inform teachers.

This booklet contains the mark scheme for paper 1 at all tiers. The paper 2 mark scheme is printed in a separate booklet. Questions have been given names so that each one has a unique identifier irrespective of tier.

## The structure of the mark schemes

The marking information for questions is set out in the form of tables, which start on page 12 of this booklet. The columns on the left-hand side of each table provide a quick reference to the tier, question number, question part, and the total number of marks available for that question part.

The **Correct response** column usually includes two types of information:

- a statement of the requirements for the award of each mark, with an indication of whether credit can be given for correct working, and whether the marks are independent or cumulative
- examples of some different types of correct response, including the most common.

The **Additional guidance** column indicates alternative acceptable responses, and provides details of specific types of response that are unacceptable. Other guidance, such as when 'follow through' is allowed, is provided as necessary.

Questions with a *Using and applying mathematics element* are identified in the mark scheme by an encircled *U* with a number that indicates the significance of using and applying mathematics in answering the question. The *U* number can be any whole number from 1 to the number of marks in the question.

For graphical and diagrammatic responses, including those in which judgements on accuracy are required, marking overlays have been provided as the centre pages of this booklet.

The 2006 key stage 3 mathematics tests and mark schemes were developed by the Mathematics Test Development Team at Edexcel.

# General guidance

## Using the mark schemes

Answers that are numerically equivalent or algebraically equivalent are acceptable unless the mark scheme states otherwise.

In order to ensure consistency of marking, the most frequent procedural queries are listed on the following two pages with the prescribed correct action. This is followed by further guidance relating to marking of questions that involve money, negative numbers, algebra, time, coordinates or probability. Unless otherwise specified in the mark scheme, markers should apply the following guidelines in all cases.

**What if ...**

|  |   |
|--|---|
| <i>The pupil's response does not match closely any of the examples given.</i>    | Markers should use their judgement in deciding whether the response corresponds with the statement of requirements given in the <b>Correct response</b> column. Refer also to the <b>Additional guidance</b> .  |
| <i>The pupil has responded in a non-standard way.</i>                            | Calculations, formulae and written responses do not have to be set out in any particular format. Pupils may provide evidence in any form as long as its meaning can be understood. Diagrams, symbols or words are acceptable for explanations or for indicating a response. Any correct method of setting out working, however idiosyncratic, is acceptable. Provided there is no ambiguity, condone the continental practice of using a comma for a decimal point.   |
| <i>The pupil has made a conceptual error.</i>                                    | In some questions, a method mark is available provided the pupil has made a computational, rather than conceptual, error. A computational error is a slip such as writing $4 \times 6 = 18$ in an otherwise correct long multiplication. A conceptual error is a more serious misunderstanding of the relevant mathematics; when such an error is seen no method marks may be awarded. Examples of conceptual errors are: misunderstanding of place value, such as multiplying by 2 rather than 20 when calculating $35 \times 27$ ; subtracting the smaller value from the larger in calculations such as $45 - 26$ to give the answer 21; incorrect signs when working with negative numbers. |
| <i>The pupil's accuracy is marginal according to the overlay provided.</i>       | Overlays can never be 100% accurate. However, provided the answer is within, or touches, the boundaries given, the mark(s) should be awarded.   |
| <i>The pupil's answer correctly follows through from earlier incorrect work.</i> | Follow through marks may be awarded only when specifically stated in the mark scheme, but should not be allowed if the difficulty level of the question has been lowered. Either the correct response or an acceptable follow through response should be marked as correct.   |
| <i>There appears to be a misreading affecting the working.</i>                   | This is when the pupil misreads the information given in the question and uses different information. If the original intention or difficulty level of the question is not reduced, deduct one mark only. If the original intention or difficulty level is reduced, do not award any marks for the question part.   |
| <i>The correct answer is in the wrong place.</i>                                 | Where a pupil has shown understanding of the question, the mark(s) should be given. In particular, where a word or number response is expected, a pupil may meet the requirement by annotating a graph or labelling a diagram elsewhere in the question.  |

**What if ...**

|  |   |   |
|--|---|---|
| <i>The final answer is wrong but the correct answer is shown in the working.</i>                             | Where appropriate, detailed guidance will be given in the mark scheme and must be adhered to. If no guidance is given, markers will need to examine each case to decide whether:  |   |
|  | the incorrect answer is due to a transcription error;   | If so, award the mark.  |
|  | in questions not testing accuracy, the correct answer has been given but then rounded or truncated;   | If so, award the mark.  |
|  | the pupil has continued to give redundant extra working which does not contradict work already done;  | If so, award the mark.  |
|  | the pupil has continued, in the same part of the question, to give redundant extra working which does contradict work already done.   | If so, do not award the mark. Where a question part carries more than one mark, only the final mark should be withheld. |
| <i>The pupil's answer is correct but the wrong working is seen.</i>  | A correct response should always be marked as correct unless the mark scheme states otherwise.  |   |
| <i>The correct response has been crossed or rubbed out and not replaced.</i>                                 | Mark, according to the mark scheme, any legible crossed or rubbed out work that has not been replaced.  |   |
| <i>More than one answer is given.</i>  | If all answers given are correct or a range of answers is given, all of which are correct, the mark should be awarded unless prohibited by the mark scheme. If both correct and incorrect responses are given, no mark should be awarded. |   |
| <i>The answer is correct but, in a later part of the question, the pupil has contradicted this response.</i> | A mark given for one part should not be disallowed for working or answers given in a different part, unless the mark scheme specifically states otherwise.  |   |

### Marking specific types of question

| <b>Responses involving money</b><br><i>For example: £3.20 £7</i>   |  |
|--|--|
| <b>Accept ✓</b>  | <b>Do not accept ✗</b>   |
| <ul style="list-style-type: none"> <li>✓ Any unambiguous indication of the correct amount<br/>eg £3.20(p), £3 20, £3,20, 3 pounds 20, £3-20, £3 20 pence, £3:20, £7.00</li> <li>✓ The unit, £ or p, is usually printed in the answer space. Where the pupil writes an answer outside the answer space with <b>no</b> units, accept responses that are unambiguous when considered alongside the given units<br/>eg with £ given in the answer space, accept<br/>3.20<br/>7 or 7.00</li> <li>✓ Given units amended<br/>eg with £ crossed out in the answer space, accept<br/>320p<br/>700p</li> </ul> | <ul style="list-style-type: none"> <li>✗ Incorrect or ambiguous indication of the amount<br/>eg £320, £320p or £700p</li> <li>✗ Ambiguous use of units outside the answer space<br/>eg with £ given in the answer space, do not accept 3.20p outside the answer space</li> <li>✗ Incorrect placement of decimal points, spaces, etc or incorrect use or omission of 0<br/>eg £3.2, £3 200, £32 0, £3-2-0 £7.0</li> </ul> |

| <b>Responses involving negative numbers</b><br><i>For example: -2</i> |   |
|---|---|
| <b>Accept ✓</b>   | <b>Do not accept ✗</b>  |
|   | <p>To avoid penalising the error below more than once within each question, do not award the mark for the <i>first</i> occurrence of the error within each question. Where a question part carries more than one mark, only the final mark should be withheld.</p> <ul style="list-style-type: none"> <li>✗ Incorrect notation<br/>eg 2-</li> </ul> |

| <b>Responses involving the use of algebra</b>   |   |
|---|---|
| For example: $2 + n$ $n + 2$ $2n$ $\frac{n}{2}$ $n^2$   |   |
| <b>Accept ✓</b>   | <b>Take care ! Do not accept ✗</b>  |
| <p>✓ Unambiguous use of a different case or variable<br/>eg <math>N</math> used for <math>n</math><br/><math>x</math> used for <math>n</math></p> <p>✓ Words used to precede or follow equations or expressions<br/>eg <math>t = n + 2</math> tiles or<br/>tiles = <math>t = n + 2</math><br/>for <math>t = n + 2</math></p> <p>✓ Unambiguous letters used to indicate expressions<br/>eg <math>t = n + 2</math> for <math>n + 2</math></p> | <p>! Unconventional notation<br/>eg <math>n \times 2</math> or <math>2 \times n</math> or <math>n2</math><br/>or <math>n + n</math> for <math>2n</math><br/><math>n \times n</math> for <math>n^2</math><br/><math>n \div 2</math> for <math>\frac{n}{2}</math> or <math>\frac{1}{2}n</math><br/><math>2 + 1n</math> for <math>2 + n</math><br/><math>2 + 0n</math> for <math>2</math></p> <p>Within a question that demands simplification, do not accept as part of a final answer involving algebra. Accept within a method when awarding partial credit, or within an explanation or general working.</p> <p>✗ Embedded values given when solving equations<br/>eg in solving <math>3x + 2 = 32</math>,<br/><math>3 \times 10 + 2 = 32</math> for <math>x = 10</math></p> <p>To avoid penalising the two types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type within each question. Where a question part carries more than one mark, only the final mark should be withheld.</p> <p>! Words or units used within equations or expressions<br/>eg <math>n</math> tiles + 2<br/><math>n</math> cm + 2</p> <p>Do not accept on their own. Ignore if accompanying an acceptable response.</p> <p>✗ Ambiguous letters used to indicate expressions<br/>eg <math>n = n + 2</math> for <math>n + 2</math></p> |

| <b>Responses involving time</b><br><i>A time interval For example: 2 hours 30 minutes</i>   |  |
|---|--|
| <b>Accept ✓</b>   | <b>Take care ! Do not accept ✗</b>   |
| <ul style="list-style-type: none"> <li>✓ Any unambiguous indication<br/>eg 2.5 (hours), 2h 30</li> <li>✓ Digital electronic time<br/>ie 2:30</li> </ul>   | <ul style="list-style-type: none"> <li>✗ Incorrect or ambiguous time interval<br/>eg 2.3(h), 2.30, 2-30, 2h 3,<br/>2.30min</li> <li>! The unit, hours and/or minutes, is usually printed in the answer space. Where the pupil writes an answer outside the answer space, or crosses out the given unit, accept answers with correct units, unless the question has specifically asked for other units to be used.</li> </ul> |
| <b>A specific time For example: 8:40am 17:20</b>  |  |
| <b>Accept ✓</b>   | <b>Do not accept ✗</b>   |
| <ul style="list-style-type: none"> <li>✓ Any unambiguous, correct indication<br/>eg 08.40, 8.40, 8:40, 0840, 8 40,<br/>8-40, twenty to nine, 8,40</li> <li>✓ Unambiguous change to 12 or 24 hour clock<br/>eg 17:20 as 5:20pm, 17:20pm</li> </ul> | <ul style="list-style-type: none"> <li>✗ Incorrect time<br/>eg 8.4am, 8.40pm</li> <li>✗ Incorrect placement of separators, spaces, etc or incorrect use or omission of 0<br/>eg 840, 8:4:0, 084, 84</li> </ul>   |

| <b>Responses involving coordinates</b><br><i>For example: (5, 7)</i>   |   |
|--|---|
| <b>Accept ✓</b>  | <b>Do not accept ✗</b>  |
| <ul style="list-style-type: none"> <li>✓ Unconventional notation<br/>eg (05, 07)<br/>(five, seven)<br/><math>\begin{matrix} x &amp; y \\ (5, &amp; 7) \end{matrix}</math><br/>(<math>x = 5, y = 7</math>)</li> </ul> | <ul style="list-style-type: none"> <li>✗ Incorrect or ambiguous notation<br/>eg (7, 5)<br/><math>\begin{matrix} y &amp; x \\ (7, &amp; 5) \end{matrix}</math><br/>(5x, 7y)<br/>(<math>5^x, 7^y</math>)<br/>(<math>x - 5, y - 7</math>)</li> </ul> |

| <b>Responses involving probability</b><br>A numerical probability should be expressed as a decimal, fraction or percentage only.<br>For example: 0.7 $\frac{7}{10}$ 70%  |   |
|--|---|
| Accept ✓   | Take care ! Do not accept ✗   |
| <p>✓ Equivalent decimals, fractions and percentages<br/>           eg 0.700, <math>\frac{70}{100}</math>, <math>\frac{35}{50}</math>, 70.0%</p> <p>✓ A probability correctly expressed in one acceptable form which is then incorrectly converted, but is still less than 1 and greater than 0<br/>           eg <math>\frac{70}{100} = \frac{18}{25}</math></p> | <p>The first <b>four</b> categories of error below should be ignored if accompanied by an acceptable response, but should not be accepted on their own. However, to avoid penalising the first <b>three</b> types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type of error unaccompanied by an acceptable response. Where a question part carries more than one mark, only the final mark should be withheld.</p> <p>! A probability that is incorrectly expressed<br/>           eg 7 in 10<br/>              7 over 10<br/>              7 out of 10<br/>              7 from 10</p> <p>! A probability expressed as a percentage without a percentage sign.</p> <p>! A fraction with other than integers in the numerator and/or denominator.</p> <p>! A probability expressed as a ratio<br/>           eg 7 : 10, 7 : 3, 7 to 10</p> <p>✗ A probability greater than 1 or less than 0</p> |

## Recording marks awarded on the test paper

All questions, even those not attempted by the pupil, will be marked, with a 1 or a 0 entered in each marking space. Where 2m can be split into 1m gained and 1m lost, with no explicit order, then this will be recorded by the marker as 1  
0

The total marks awarded for a double page will be written in the box at the bottom of the right-hand page, and the total number of marks obtained on the paper will be recorded on the front of the test paper.

A total of 120 marks is available in each of tiers 3–5, 4–6 and 6–8.

A total of 121 marks is available in tier 5–7.

## Awarding levels

The sum of the marks gained on paper 1, paper 2 and the mental mathematics paper determines the level awarded. Level threshold tables, which show the mark ranges for the award of different levels, will be available on the NAA website [www.naa.org.uk/tests](http://www.naa.org.uk/tests) from Monday 19 June 2006. NAA will also send a copy to each school in July.

Schools will be notified of pupils' results by means of a marksheet, which will be returned to schools by the external marking agency with the pupils' marked scripts. The marksheet will include pupils' scores on the test papers and the levels awarded.

**BLANK PAGE**

| Tier & Question |     |     |     |   | Correct response  | Additional guidance   |
|-----------------|-----|-----|-----|---|---|---|
| 3-5             | 4-6 | 5-7 | 6-8 | 1 |   |   |
|                 |     |     |     |   | <p><b>1m</b> Draws only the correct line of symmetry on the first shape, ie</p>    | <p><b>! Lines not ruled, accurate or solid</b><br/>Accept lines, even if dotted or dashed, extending at least across the shaded area, provided the pupil's intention is clear</p> |
|                 |     |     |     |   | <p><b>1m</b> Draws only the correct line of symmetry on the second shape, ie</p>  |   |

| Tier & Question |     |     |     |   | Step sizes   |
|-----------------|-----|-----|-----|---|--|
| 3-5             | 4-6 | 5-7 | 6-8 | 2   |  |
| a               |     |     |     | <p>1m Shows a correct way, other than add 8 then add 12, using exactly two steps<br/>eg</p> <ul style="list-style-type: none"> <li>▪ </li> <li>▪ </li> <li>▪ </li> </ul> | <p>✓ Add 12 then add 8</p> <p>✓ Fractions, decimals or negatives</p> <p>! Operations omitted<br/>Condone, provided the directions of any arrows, if shown, are correct<br/>eg, accept</p> <ul style="list-style-type: none"> <li>♦ </li> </ul> <p>! Arrows not shown or not consistent with their numbers<br/>Condone, provided the directions of any arrows, if shown, are correct<br/>eg, accept</p> <ul style="list-style-type: none"> <li>♦ </li> </ul> |
| b               |     |     |     | <p>1m 5</p>   | <p>! Answer shown only on the diagram<br/>eg</p> <ul style="list-style-type: none"> <li>♦ </li> </ul> <p>Accept provided there is no ambiguity</p>   |
| c               |     |     |     | <p>1m 6</p> <p>1m <math>2\frac{1}{2}</math> or equivalent</p> <p>1m 8</p>   | <p>✗ Answer of -8</p>  |

| Tier & Question |     |     |     |  |                  |   |   |   | <b>Lemonade</b> |  |  |
|-----------------|-----|-----|-----|--|------------------|---|---|---|-----------------|--|--|
| 3-5             | 4-6 | 5-7 | 6-8 |  |                  |   |   |   |                 |  |  |
| 5               |     |     |     |  | Correct response |   | Additional guidance   |   |                 |  |  |
| a               |     |     |     |  | 1m               | £ 1.17  | <p><b>!</b> For parts (a), (b) and (c), costs given in pence without amendment of units<br/>Penalise only the first occurrence of the cost given in pence within a correct response<br/>eg, for the costs as</p> <ul style="list-style-type: none"> <li>♦ 117, 110, 109 [with correct bottle sizes]<br/>Mark as 0, 1, 1</li> <li>eg, for the costs as</li> <li>♦ 110, 109, 117 [with correct bottle sizes]<br/>Mark as 0, 0, 1</li> </ul> |   |                 |  |  |
| b               |     |     |     |  | 1m               | <p>Gives a complete correct response, ie</p> <p>Two <math>1\frac{1}{2}</math> litre bottles, cost £ 1.10</p> <p>or</p> <p>A 1 litre bottle and a 2 litre, cost £ 1.09</p>   | (U1)  | <p><b>✓</b> For parts (b) or (c), unambiguous identification<br/>eg, for the two <math>1\frac{1}{2}</math> litre bottles</p> <ul style="list-style-type: none"> <li>♦ One of the middle size, and another</li> <li>♦ <math>1\frac{1}{2} + 1\frac{1}{2}</math></li> <li>♦ 55 and 55</li> </ul>   |                 |  |  |
| c               |     |     |     |  | 1m               | Gives a complete correct response that is different from one credited in part (b)   | (U1)  | <p><b>!</b> For parts (b) or (c), uses three 1 litre bottles and gives the cost as £1.17<br/>If their (a) is either 1.10 or 1.09, accept</p> <p><b>!</b> For parts (b) and (c), correct costs given with incorrect or no identification of bottle sizes<br/>eg</p> <ul style="list-style-type: none"> <li>♦ 1.10, then<br/>1.09</li> </ul> <p>Mark as 0, 1</p>                        |                 |  |  |
| d               |     |     |     |  | 2m               | 13  |   |   |                 |  |  |
|                 |     |     |     |  | or<br>1m         | <p>Shows a complete correct method with not more than one computational error<br/>eg</p> $\begin{array}{r} 1.5 \\ 1.5 \\ \hline 4 \text{ (error)} \end{array} \begin{array}{r} 2 \\ 2 \\ 2 \\ 2 \\ \hline 2 \\ 2 \\ \hline 10 \end{array} \quad 4 + 10 = 14$ <p>or</p> <p>Shows the value 3, with no evidence of an incorrect method for this value</p> |   | <p><b>✗</b> Conceptual error<br/>eg</p> $\begin{array}{r} 1.5 \\ 1.5 \\ \hline 2.10 \end{array} \begin{array}{r} 2 \\ 2 \\ 2 \\ 2 \\ \hline 2 \\ 2 \\ \hline 10 \end{array} \quad 2.10 + 10 = 12.10$ <ul style="list-style-type: none"> <li>♦ <math>5 \times 2 = 10, 2 \times 1\frac{1}{2} = 2\frac{1}{2}</math></li> <li>♦ <math>10 + 2\frac{1}{2} = 12\frac{1}{2}</math></li> </ul> |                 |  |  |

| Tier & Question |     |     |     |    |     |                         | <b>Computation</b>         |  |
