### **Concepts**

Children should know and use the following vocabulary: *double, twice, half, halve, whole, divide by, divide into.*

Children should have a good working knowledge of all table facts up to  $10 \times 10$ .

They should also know them 'backwards', eg. know how many eights make 56.

**On the MathSphere CD there are pages of practice multiplication tables with the opportunity to time how long it takes to complete a table and then try for improvement in speed and accuracy.**

Children should know all the squares of number up to  $10 \times 10$ .

They should be able to answer a whole range of mental questions such as:

- What are eight sevens?
- How many fives are there in 45 ?
- What is 7 times 8 ?
- Multiply 5 by 7.
- What is 9 multiplied by 0 ?
- What is 24 divided by 6 ?
- What is 45 shared between five people?
- What is one third of 24 ?

Children should understand that halving is the inverse (opposite) operation to multiplication by 2.

They should be able to answer a range of questions on doubling and halving involving decimals used with money (ie. half of £35.60), and simple units such as centimetres.

It is very important to know your tables really well.

Yes, especially if you want to be good at mathematics!

That's why I'm so good at my tables.

**Take this opportunity to see which table facts you know really well.**

Fill in all the table facts you know without straining your brain.

Now write down all the ones you are not sure about and ask someone to test you until you know them all.

Here are some questions about the table square.
